1N34A Availability: I've heard that this isn't available "nearby". You have several options around this problem:

Option 1. The EASIEST (and possibly cheaper) option is to go with a SCHOTTKY diode (replace the two diodes with a SINGLE schottky) like so:

Over at e-gizmo the 1N5819 is P6.50... (and I dunno if it's really in-stock):

The screenshot shows the e-Gizmo website with a search bar containing "schottky". The search results page displays the product "1N5819 1A 40V Schottky Diode D041". The product page includes a product image, a title, a rating section, and a price of ₱6.50. The page also features a "Course Chat" sidebar.
